PERSONAL STATEMENT

Working in the Space research field since the 1989, I have contributed with qualified hardware and software to fly more than a dozen of instruments in the frame of the Solar system exploration. Nowadays, I wish to complete in cooperation with Research Institutions or Companies, two Projects I am leading on micro propulsion of small satellites and on their high reliability on-board electronics and data processing S/W. The primary objective of these Projects is to withstand low Earth orbits (LEO) and offer commercial services from space, such as 24/7 high resolution ground observations (at 10 cm resolution) or airports traffic control to replace in a near future the ground expensive traffic control towers.

Communication skills

I possess good communication skills trained by the long experience (> 25 years) in the aerospace research field and matured through congresses, management of international teams, attendance of many meetings with the main international agencies (ESA, NASA, DARA, CASC etc. )

Organisational / managerial skills

Technical responsible for the design and development of space sensors and associated flight qualification tests.

Job-related skills

Sensor design, digital and analog electronic design, development of multicore/parallel computing. Environmental simulations (thermo-mechanical / radiation). Development of Ground Support Equipment (GSE) to support the test of flight units. Development of H/W and S/W of payload flown in main planetary missions, supporting the development of Data Processing Units, and detectors. I have patented the high frequency shutters (50kHz) that allowed the AMDL to be the leading company within the aerospace industry in the field of atomic cameras for neutral atoms. This technology will fly on ESA's BepiColombo Mercury within the SERENA / ELENA Facility. I am patenting technologies for micro thrusters to operate on microsattellites in LEO orbits. I have designed and developed in different ESA space programs a wide range of High Reliability Digital Processing Units based on the Leon 3FT processor both by dedicated and customized FPGA-based developments (bus to 8, 16 and 32 bits) and by the latest generation of multicore processors such as GR712RC of Cobham / Aeroflex.
